HISABKETAB AI

Tax Rules, Legal Clauses & Financial Formula Mapping Report

How Pakistan tax law maps to features, validations and calculations in the FYP

Project	HisabKetab AI
Focus	AI-powered personal finance and tax intelligence for Pakistan
Primary Legal Basis	Income Tax Ordinance, 2001; Income Tax Rules, 2002; applicable Finance Act / First Schedule
Prepared For	FYP proposal, design, implementation and defense reference

1. Purpose and Scope

This report identifies the tax-law provisions, amendment clauses, FBR filing rules and financial formulas that are relevant to HisabKetab AI. For each item, it explains what the provision means, why it matters to the project, which product feature uses it, and how it should be implemented in the system.

Important legal-source note: The uploaded PDF is a "Notes on Clauses" document. It summarizes proposed/amending provisions and is not, by itself, the complete consolidated tax law. Therefore, HisabKetab AI should use the enacted Income Tax Ordinance, applicable Finance Act, First Schedule, FBR rate cards and current electronic return forms for the selected tax year. The legal engine should always be versioned by tax year.

2. Legal Sources Used by the Project

ID	Source	What it governs	HisabKetab AI use
S1	Uploaded "Notes on Clauses" PDF	Amendment-clause summaries, especially Clause 9 relating to the Income Tax Ordinance	Used to identify relevant amendments and feature opportunities.
S2	Income Tax Ordinance, 2001 (current consolidated version)	Core charging, income heads, filing, wealth, records, credits, penalties	Primary statutory logic for the tax engine.
S3	Income Tax Rules, 2002	Prescribed forms, record/book-keeping and procedural rules	Supports receipt/document storage, business records and compliance logic.
S4	Applicable Finance Act + First Schedule	Year-specific slabs, rates, surcharge and amendments	Feeds the year-versioned tax calculation engine.
S5	FBR Withholding Tax Rate Card	Current withholding rates by tax year	Feeds withholding/advance-tax calculations and credits.
S6	FBR IRIS filing guidance / electronic return forms	Return + wealth statement workflow, reconciliation, filing and revision	Defines the user-facing tax preparation workflow.

3. Core Income Tax Ordinance Sections Used by HisabKetab AI

Provision	Meaning	Project Feature	Why We Use It	Implementation Note
Section 9 - Taxable Income	Taxable income is determined from total income after deductible allowances, subject to the Ordinance.	Taxable Income Engine	Provides the base figure on which normal slab tax is calculated.	Taxable income = total income - deductible allowances (not below zero). [S2]
Sections 10-11 - Total Income & Heads of Income	Organizes income under statutory heads and aggregates income for the tax year.	Income Classification	Maps user income into Salary, Property, Business, Capital Gains and Other Sources.	AI classifies the transaction; rule engine applies the correct head. [S2]

Provision	Meaning	Project Feature	Why We Use It	Implementation Note
Section 12 - Salary	Governs income chargeable under the Salary head.	Salary Income Module	Used for salary entries, annual salary summary and salaried tax computation.	Use year-specific salary slabs from the First Schedule. [S2/S4]
Section 15 - Income from Property	Governs taxable income from property/rent.	Property Income Module	Used where users record rental/property income.	Property rules remain separate from ordinary personal-expense logic. [S2]
Section 18 - Income from Business	Governs business/professional income.	Freelance / Business Module	Important for freelancers, sole proprietors and business users.	Gross business income is reduced only by legally allowable deductions; personal spending is not automatically deductible. [S2]
Section 37 - Capital Gains	Deals with capital gains on disposal of capital assets, subject to specific rules/rates.	Investment / Asset Disposal Module	Used when user sells taxable assets/securities/property where applicable.	Gain is calculated from disposal value and tax basis/allowable cost, then the correct regime/rate is applied. [S2/S4]
Section 39 - Other Sources	Covers income not falling under the principal heads, subject to law.	Other Income Module	Used for bank profit, certain pensions/other receipts where legally classified here.	Prevents unknown receipts from being incorrectly treated as salary/business. [S2]
Section 111 - Unexplained Income or Assets	Addresses unexplained amounts, investments, assets or expenditure where lawful source is not satisfactorily explained, subject to statutory conditions/exceptions.	Reconciliation Risk / Anomaly Module	The app flags unexplained differences for review before filing.	The app should flag risk, not automatically declare a legal violation. [S2]
Section 114 - Return of Income	Provides the legal framework for furnishing the return of income.	Tax Return Preparation	HisabKetab AI organizes income, deductions, tax and supporting data into return-ready information.	Final submission remains through the current FBR mechanism unless an official integration is available. [S2/S6]
Section 116 - Wealth Statement	Requires wealth/assets and liabilities information and related reconciliation where applicable.	Wealth Statement & Reconciliation	Core legal basis for assets, liabilities, personal expenditure and year-to-year wealth checks.	FBR states a wealth statement must reconcile before successful return submission. [S6]
Section 116A - Foreign Income & Assets Statement	Requires specified resident individuals meeting statutory thresholds to furnish foreign income/assets information.	Advanced / Optional Foreign Assets Module	Can later warn eligible users that separate foreign asset reporting may be required.	Treat as optional/advanced scope unless the user profile triggers it. [S2]
Section 168 - Credit for Tax Collected/Deducted	Provides credit for qualifying tax deducted or collected, subject to the Ordinance.	Withholding Credit Module	Tracks eligible tax already deducted so it can reduce remaining liability where adjustable.	Tax payable after credit = assessed tax - allowable credits/withholding. [S2/S5]

Provision	Meaning	Project Feature	Why We Use It	Implementation Note
Section 170 - Refunds	Provides the framework for refund claims where tax has been overpaid, subject to legal requirements.	Refund Indicator	If credits exceed computed liability, the system can show a potential refund position.	The app should label this “potential/estimated refund” until validated. [S2]
Section 174 - Records	Requires prescribed records to be maintained; FBR guidance states taxable persons should keep return records for six years.	Receipt / Document Vault	Supports storage of receipts, transaction evidence, tax reports and supporting documents.	HisabKetab AI can retain searchable records by tax year and warn before deletion. [S2/S3/S6]
Section 181 - Registration	Covers taxpayer registration.	Tax Profile / NTN Guidance	Stores NTN/registration status and helps first-time users understand that registration precedes filing.	No app-side issuance of NTN unless supported by an official integration. [S2/S6]
Section 182 / 182A - Penalties / ATL surcharge framework	Covers penalties for failures such as late return/wealth statement and late-filer ATL consequences.	Compliance Alerts	Generates deadline reminders and late-filing warnings.	Penalty values should be fetched/versioned for the relevant tax year; never hard-code permanently. [S2/S6]

4. Income Tax Rules Used by the Project

Rule / Control	Meaning	Feature	Use in HisabKetab AI
Income Tax Rules - record keeping chapter / Rule 28 context	Prescribes minimum books, documents and records for taxpayers deriving business income.	Document Vault + Business Ledger	Supports maintaining structured receipts, expenses, sales, assets and liabilities.
Rule 29 - books, documents and records	Requires proper records of money received/expended, sales/purchases/services, assets and liabilities; computerized/electronic records can form part of records.	OCR Receipt Storage + Digital Ledger	Directly supports HisabKetab AI’s electronic transaction ledger and receipt evidence.
Electronic return / prescribed form rules	FBR issues electronic forms and rules for return filing by tax year.	Return Mapping Layer	The app’s output fields should map to the current FBR form rather than a permanent static form.
Tax-year versioning rule in system design	Not a statutory section by itself; it is a software control derived from annual Finance Act changes.	Rules Administration	Every tax rate, threshold and validation rule is stored with effective tax year and source reference.

5. Relevant Clause 9 Amendments from the Uploaded Notes on Clauses

The following Clause 9 items are the amendment notes from the uploaded source that are most relevant to HisabKetab AI. They should be treated as amendment references and verified against the enacted law for the applicable tax year before being implemented.

Clause	What It Means	Feature	Why Useful	Implementation
9(1)(ii)-(v)	Defines/expands digitally delivered services, e-commerce and online marketplace concepts.	E-commerce / Digital Income Classification	Useful when identifying online/freelance/e-commerce income and payment channels.	Build standardized transaction tags for e-commerce and digitally delivered services.
9(2)	Reduces the salaried-individual surcharge rate stated in the amendment note.	Salary Tax Engine	Shows that surcharge is tax-year dependent.	Store surcharge % and threshold as versioned tax rules; do not hard-code.
9(3)-(4)	Introduces section 6A and includes it in relevant general provisions for digital e-commerce transactions.	E-commerce Tax Module	Useful if the project supports local e-commerce sellers/platform transactions.	Mark as advanced/optional unless included in MVP.
9(5)	Introduces objective criteria for fair market rent of commercial property.	Property Income / Validation	Can support rental-income reasonableness and property-related warnings.	Use only where current enacted law and notified valuation data support it.
9(7)(a)&(b)	Disallows certain deductions related to purchases from non-filers and proportionate expense relating to cash sales.	Deduction Validation	Prevents the app from assuming every business expense is deductible.	Add rule flags: “recorded expense” vs “tax-allowable expense”.
9(8)(a)&(b)	Disallows depreciation expense on certain assets where required withholding conditions are not met.	Asset / Depreciation Validation	Links asset purchase evidence and withholding compliance to depreciation treatment.	Require acquisition/payment/withholding metadata before allowing tax depreciation.
9(10)	Recognizes payment by digital means as an acceptable funds-transfer mode for tax purposes.	Payment Method Evidence	Supports bank/card/wallet transaction records as stronger audit trail than unverified cash.	Store payment method and transaction reference.
9(13)	Introduces tax credit for interest on a qualifying low-cost housing loan.	Tax Credit Suggestions	Allows the assistant to identify a potential credit where user data meets conditions.	Never grant automatically; show eligibility checklist and source.
9(15)(a)&(b)	Treats payment through digital means as an admissible mode of acquiring an asset.	Asset Purchase Tracking	Useful for connecting asset acquisition to payment evidence.	Link asset record to bank/card/digital transaction.
9(18)	Introduces restrictions on certain economic transactions for certain persons.	Compliance Status Alerts	Can warn users that filer/status conditions may affect transactions.	Use tax status + transaction type + current rule mapping.
9(19)(i)&(ii)	Introduces automated review of Income Tax Return.	Pre-Filing Automated Review	Very strong feature fit: HisabKetab AI can pre-check inconsistencies before submission.	Run missing-data, arithmetic, tax-year and reconciliation checks before report generation.

Clause	What It Means	Feature	Why Useful	Implementation
9(30)	Introduces withholding provisions for pension payments.	Pension Income / Withholding	Needed if pension income is supported.	Use pension type, age/conditions and tax-year rules; advanced scope.
9(31)	Introduces capital-gain tax on disposal of certain debt securities.	Investment Tax Module	Supports users with debt-security disposals.	Advanced scope; requires instrument type, cost and disposal data.
9(33)	Introduces withholding on payments received by e-intermediary/courier for local e-commerce.	E-commerce Withholding	Relevant to online sellers and COD/digital payment receipts.	Track gross receipt, intermediary/courier, withholding and net receipt.
9(34)	Provides eligibility for exemption from advance tax on certain immovable property sales subject to conditions.	Property Tax Eligibility	Lets app ask the right property-history/declaration questions.	Eligibility engine should be checklist-based and source-linked.
9(35)	Requires information from online marketplaces, payment intermediaries and couriers.	Data Model for E-Commerce	Guides which fields may be useful for e-commerce transaction evidence.	Merchant/platform, payment intermediary, courier and reference IDs.
9(36)	Enables exchange of banking/tax information for high-risk persons.	Consistency / Risk Checks	Supports design principle that bank and declared tax data should be consistent.	Flag mismatches for user review; do not impersonate FBR risk scoring.
9(38)	Amends taxpayer registration provisions and includes e-commerce platforms.	Registration Guidance	Relevant for seller/platform user profiles.	Tax status captured in profile; current eligibility verified against enacted rules.
9(39)	Enhances penalties for failure to furnish prescribed information and creates e-commerce-related penalties.	Compliance Alerts	Motivates deadline/missing-information warnings.	Warnings must quote the current tax-year rule source.
9(43)	Recognizes electronic service of notices more broadly.	Tax Notice / Reminder Support	Supports a future notification inbox/reminder workflow.	HisabKetab AI can remind users to review official FBR notices; it should not fabricate notices.
9(47)	Uploaded note describes a cash-withdrawal advance-tax rate change for non-filers, but the wording/rates are internally inconsistent.	Cash Withdrawal Tax	Potentially relevant to non-ATL users.	Do NOT implement the uploaded numeric value directly; use current official rate card / enacted law.
9(48)(A/B/C)	Provides/changes tax rates for salary/pension, super tax, dividends, profit on debt, e-commerce, withholding, capital gains, services and property transactions.	Tax Rate Engine	This is the central rate-source concept for HisabKetab AI.	Rates belong in versioned tables keyed by tax year, taxpayer type, section and transaction type.
9(51)	Changes withholding rates for filer/non-filer/late-filer property buyers and sellers.	Property Withholding Estimator	Relevant to users recording purchase/sale of immovable property.	Needs status (ATL/late/non-filer), role (buyer/seller), property value and tax year.

6. Project Tax and Filing Rules

Project Rule	Meaning	Why It Matters
Rule 1 - Tax calculations are deterministic	AI may classify/explain, but the final tax calculation must be produced by a version-controlled rules engine.	Reduces hallucination risk and makes results reproducible/defendable.
Rule 2 - Every rule has a tax year	Slabs, thresholds, surcharge, withholding and exemptions change through Finance Acts.	User selects/derives tax year; the engine loads only that year's rules.
Rule 3 - Separate personal spending from allowable business deductions	A personal expense is useful for budgeting/wealth reconciliation but is not automatically tax deductible.	Prevents the common error: income minus all living expenses = taxable income.
Rule 4 - Return and wealth data are separate but connected	FBR filing requires return information and wealth statement information; reconciliation links the two.	HisabKetab AI maintains separate tax-return and wealth datasets with cross-checks.
Rule 5 - Wealth must reconcile	Current wealth movement must be explainable using income/expenditure and legitimate reconciliation items.	The app blocks "ready" status while an unexplained difference remains.
Rule 6 - Withholding must be classified as adjustable/final/minimum where applicable	Not every deducted tax is treated identically.	Store section/nature and tax treatment instead of subtracting every tax blindly.
Rule 7 - Evidence is linked to transactions	Receipts, audio, OCR output, bank references and manual notes should be attached to source transactions.	Supports record keeping, audit trail and correction.
Rule 8 - Filing readiness is not the same as filing	The app prepares and validates data; official submission requires the current FBR process/integration.	Avoids overstating system authority.

7. Legal / Tax Formulas Used by HisabKetab AI

Formula	Taxable Income = Total Income - Deductible Allowances (minimum 0)
Meaning / Use	Core Section 9 logic. The system first classifies income, then applies only legally allowed reductions.

7.1 Taxable Income | Source: Section 9 [S2]

Formula	Total categorized income = Salary + Property + Business + Capital Gains + Other Sources
Meaning / Use	Used by the income-classification engine. Special/exempt/final-tax treatment is applied separately according to the relevant rule.

7.2 Income by Head | Source: Sections 10-11 [S2]

Formula	Tax = Base Tax for Slab + Marginal Rate x (Taxable Income - Lower Limit of Slab)

Meaning / Use	Generic implementation structure for progressive slab tax. Base tax, rate and limits must come from the selected tax year.

7.3 Tax by Slab | Source: First Schedule / Finance Act [S4]

Formula	Surcharge = Applicable Surcharge Rate x Income Tax Amount
Meaning / Use	Used only when the taxpayer and income meet the statutory threshold/conditions for that tax year.

7.4 Surcharge (where applicable) | Source: Ordinance / First Schedule [S2/S4]

Formula	Estimated Net Tax = Gross Tax + Applicable Surcharge - Adjustable Withholding / Advance Tax Credits
Meaning / Use	Shows remaining estimated liability after eligible credits. If negative, display a potential refund position subject to verification.

7.5 Net Tax Position | Source: Section 168 / Section 170 [S2]

Formula	Business Taxable Profit = Gross Business Income - Legally Allowable Business Deductions / Allowances
Meaning / Use	Used for freelancer/business users. Recorded personal expenses are excluded unless the law allows them as business deductions.

7.6 Business Taxable Profit (conceptual) | Source: Section 18 + deduction/disallowance rules [S2/S1]

Formula	Capital Gain = Disposal Consideration - Tax Basis / Allowable Cost
Meaning / Use	Used for relevant asset/investment disposals; rate and taxable treatment depend on asset type, acquisition date, status and tax year.

7.7 Capital Gain (conceptual) | Source: Section 37 / First Schedule [S2/S4]

Formula	Net Worth = Total Assets - Total Liabilities
Meaning / Use	Used in the Wealth Statement dashboard and year-end financial position.

7.8 Net Worth | Source: Project finance formula mapped to Section 116 wealth data

Formula	Change in Wealth = Current-Year Net Worth - Previous-Year Net Worth
Meaning / Use	First step in wealth reconciliation and trend analysis.

7.9 Change in Wealth | Source: Project formula mapped to FBR reconciliation [S6]

Formula	Expected Change in Wealth = Income - Personal / Household Expenses
Meaning / Use	FBR filing guidance states wealth should increase/decrease by the same amount as income exceeds/falls short of expenses. The detailed app reconciliation can include legitimate reconciliation items mapped to current FBR fields.

7.10 Basic FBR Wealth Reconciliation | Source: FBR IRIS guidance [S6]

Formula	Unexplained Difference = Actual Change in Wealth - Explained Change in Wealth
Meaning / Use	If non-zero, the app flags the amount and asks the user to identify missing income, expense, asset, liability, gift/loan/transfer or other legitimate source/use according to current form fields.

7.11 Reconciliation Difference | Source: Project validation formula

8. Personal-Finance & AI Formulas Used by HisabKetab AI

Formula	Budget Remaining = Budget Limit - Amount Spent
Meaning / Use	Used for weekly, monthly and category budgets.

8.1 Budget Remaining | Source: Project finance formula

Formula	Budget Utilization % = (Amount Spent / Budget Limit) x 100
Meaning / Use	Triggers warnings such as approaching limit, 100% reached, or exceeded.

8.2 Budget Utilization | Source: Project finance formula

Formula	Safe Daily Spend = Remaining Available Budget / Remaining Days
Meaning / Use	Used by the AI budget advisor; can be adjusted for expected recurring bills.

8.3 Safe Daily Spend | Source: Project recommendation formula

Formula	Projected Spend = Current Spend + Forecasted Remaining Spend
Meaning / Use	Supports overspending prediction and “at this rate” warnings.

8.4 Projected Period-End Spend | Source: Project analytics formula

Formula	User Share = Total Shared Expense x User Share Percentage
Meaning / Use	Example: Rs. 6,000 dinner x 50% = Rs. 3,000 user expense.

8.5 Split Expense | Source: Project transaction formula

Formula	Expected Cash = Opening Cash + Cash Inflows - Cash Outflows
Meaning / Use	Used for cash-leakage detection and cash-wallet reconciliation.

8.6 Expected Cash Balance | Source: Project finance formula

Formula	Cash Difference = Actual Cash - Expected Cash
Meaning / Use	Flags missing/unrecorded cash transactions where the difference is material.

8.7 Cash Difference | Source: Project anomaly formula

Formula	Savings = Income - Personal Expenses

Meaning / Use	Used in monthly/yearly financial-health analytics; not the same as taxable income.

8.8 Savings | Source: Project finance formula

Formula	Savings Rate % = (Savings / Income) x 100
Meaning / Use	One input to the Financial Health Score.

8.9 Savings Rate | Source: Project finance formula

Formula	Z = (Current Spend - Historical Mean) / Historical Standard Deviation
Meaning / Use	Optional statistical signal for unusually high/low spending. The final anomaly feature may combine this with rules or ML.

8.10 Spending Anomaly Z-Score | Source: Project analytics formula

Formula	Readiness % = Weighted Completed Required Items / Total Required Weight x 100
Meaning / Use	Product UX score showing completeness of income, assets, liabilities, withholding, bank balances and reconciliation. This is NOT an official FBR score.

8.11 Tax Readiness Score | Source: Project UX formula

Formula	Health Score = Weighted combination of budget control, savings rate, debt load, cash flow stability and anomaly indicators
Meaning / Use	Internal guidance metric only; weights must be documented and tested. It is not an FBR or legal metric.

8.12 Financial Health Score | Source: Project analytics formula

9. Feature-to-Law Traceability Matrix

HisabKetab AI Feature	Legal / Rule Basis	How the Feature Uses It
Voice / OCR Transaction Capture	Section 174 + Rule 29	Creates searchable evidence for income/expense records; OCR/voice is input technology, not tax law.
Income Classification	Sections 10-11, 12, 15, 18, 37, 39	Maps AI-detected transactions to statutory income heads.
Tax Calculator	Section 9 + First Schedule + Clause 9(48)	Computes taxable income and applies year-specific slabs/rates.
Salary Module	Section 12 + Clause 9(2)/(48)	Salary-specific tax and surcharge rules.
Business/Freelance Module	Section 18 + Clause 9(7)/(8)	Separates recorded expenses from allowable deductions and validates asset/depreciation evidence.
Digital Payment Evidence	Clause 9(10) and 9(15)	Stores payment references for business expense/asset evidence.
Withholding Tracker	Section 168 + FBR rate card + Clause 9(30)/(33)/(47)/(51)	Tracks tax deducted/collected and calculates estimated remaining liability.

HisabKetab AI Feature	Legal / Rule Basis	How the Feature Uses It
Property Module	Section 15 + Clause 9(5)/(34)/(51)	Rental/property income and property transaction eligibility/withholding checks.
Wealth Statement	Section 116	Builds assets/liabilities and year-end wealth data.
Wealth Reconciliation	Section 116 + FBR filing guidance	Compares wealth movement with income, expenses and mapped reconciliation items.
Anomaly / Unexplained Wealth Warning	Section 111	Flags unexplained financial differences for user review; does not make a legal determination.
Automated Pre-Filing Review	Clause 9(19)	Runs consistency, missing data, rule, arithmetic and reconciliation checks.
Tax Readiness Score	Sections 114/116 + project rules	Shows whether required app data is complete before report generation; not an official FBR status.
Compliance Alerts	Section 182/182A + Clause 9(39)	Deadline, missing-information and late-filing warnings.
Tax Notice Reminder	Clause 9(43)	Future support for reminders based on official electronic notices entered/linked by the user.
E-Commerce User Module	Clause 9(1), 9(3), 9(33), 9(35), 9(38), 9(39)	Supports online seller/platform transaction classification and tax compliance data.

10. Example End-to-End Use Case

1. User records daily expenses and income by voice, OCR receipt or manual entry.
2. AI converts the input into structured fields: amount, category, payment method, date, person, split and transaction type.
3. The transaction engine separates personal expense, business expense, asset purchase, liability movement and income.
4. At year-end, the tax engine classifies income under the appropriate statutory head and applies the selected tax year's rule set.
5. Eligible withholding/advance-tax credits are matched to the user's tax records.
6. Assets and liabilities are summarized into net worth and a wealth statement dataset.
7. The reconciliation engine compares current wealth movement with income, expenditure and recognized reconciliation items.
8. The pre-filing review checks missing data, inconsistencies, unsupported deductions, tax-year mismatches and unresolved reconciliation differences.
9. The app generates a tax-ready summary and clearly explains the calculation. Official filing remains through the current FBR method unless an approved integration is available.

11. AI vs Rule Engine - Responsibility Boundary

Responsibility	HisabKetab AI Design Rule
AI / ML MAY do	Speech-to-text, OCR, transaction extraction, category prediction, intent detection, anomaly suggestions, natural-language explanation.
Rules Engine MUST do	Taxable income logic, tax slab application, surcharge, withholding credit treatment, wealth reconciliation arithmetic, tax-year validations.
User MUST confirm	Low-confidence voice/OCR data, unusual transactions, split percentages, asset values, deductions/credits, missing reconciliation sources.
System MUST record	Tax year, rule version, source reference, input evidence, calculation trace and user corrections.

12. Scope Boundaries

- Customs Act, Sales Tax Act, Federal Excise Act and ICT Tax on Services provisions appearing in the uploaded PDF are not part of the core individual-income-tax MVP unless a later business-tax module is added.
- HisabKetab AI should not present AI-generated legal conclusions as final tax advice. It should explain calculations and flag issues using traceable rules.
- Rates, thresholds, filer-status consequences and withholding treatment must be updated by tax year from official FBR sources.
- Direct IRIS filing should remain a stretch goal unless an official supported integration is available.
- Tax Readiness Score and Financial Health Score are project metrics, not FBR/legal scores.

13. Recommended Database Structure for Tax Rules

Field	Example	Purpose
tax_year	e.g., 2026 / 2027	Selects the correct rule set.
rule_id	unique ID	Traceability and audit.
legal_reference	Section / clause / schedule	Explains legal basis.
taxpayer_type	salary / non-salary / AOP / etc.	Controls applicability.
transaction_type	salary / property / dividend / etc.	Maps financial data to rule.
lower_limit / upper_limit	numeric thresholds	Slab or eligibility conditions.
base_tax / rate	numeric values	Calculation parameters.
filer_status	ATL / late / non-ATL where relevant	Withholding/property rule selection.
effective_from / effective_to	dates	Prevents using a future/expired rule.
source_url / source_doc	official reference	Auditability and updates.
version / approved_by	internal governance	Shows which rules were tested and released.

14. Key Implementation Recommendation

Recommended architecture: Use AI to understand financial inputs, but use a deterministic, source-linked, tax-year-versioned rule engine to calculate tax and wealth reconciliation. This makes HisabKetab AI safer, easier to test, easier to defend academically, and easier to update when FBR rules change.

15. Sources / Reference Notes

ID	Reference	Use
S1	Uploaded PDF: Notes on Clauses	Primary source for Clause 9 amendment summaries used in Section 5 of this report.
S2	Federal Board of Revenue - Income Tax Ordinance, 2001	FBR lists the consolidated Ordinance amended up to 30 June 2026.
S3	Federal Board of Revenue - Income Tax Rules, 2002	Used for record/book-keeping and procedural support.
S4	Finance Act 2026 / First Schedule	Year-specific tax rates and amendments.
S5	FBR Withholding Tax Rate Card for Tax Year 2027	Current withholding rate card updated to 30 June 2026.
S6	FBR - File Income Tax Return / IRIS guidance	Return + Wealth Statement requirement, wealth reconciliation, revision and six-year record-keeping guidance.

Legal disclaimer: This FYP report is a software-design and research reference. Tax law changes frequently and actual filing must be based on the enacted law, official FBR forms/rate cards and the taxpayer's facts for the relevant tax year.
